PROFESSIONAL SUMMARY

Highly experienced ICT and telecommunications professional with more than 7 years of progressive experience across wireless networks, ICT infrastructure, broadcasting systems, and VSAT technologies. Proven expertise in installation, configuration, troubleshooting, and maintenance of enterprise and humanitarian ICT systems including LAN/WAN, SD-WAN, wireless, VSAT, radio communications, and data center infrastructure. Strong background in Level-1/Level-2 ICT support, project deployment, asset and inventory management, and information management practices. Adept at working in complex, multi-site environments and aligning ICT operations with international standards and policies. Currently advancing expertise through MSc programs in Artificial Intelligence & Data Science and Financial Data Engineering.

PROFESSIONAL EXPERIENCE

Senior Wireless & Infrastructure Network Engineer

Ethio Telecom – Ethiopia

2020 – Present

- **Massive MIMO Integration:** He has overseen the deployment of Massive MIMO technology at hundreds of sites, utilizing many antennas to significantly improve spectrum efficiency and data speeds.

- **Install, configure, operate, and maintain** LAN, WAN, SD-WAN, wireless, microwave, and fiber-based network infrastructure.
- **Infrastructure Modernization:** The scope of work includes the replacement of legacy copper systems with high-speed fiber and the expansion of the International Gateway (IGW) capacity to accommodate rising international social media and cloud traffic.
- **Lead troubleshooting,** incident resolution, and root-cause analysis for complex network and infrastructure issues.
- **Install, maintain, and repair** IT hardware, telecom equipment, and network infrastructure in line with international best practices.
- Perform regular quality control checks and preventive maintenance on existing ICT infrastructure.
- **Fiber to the Tower (FTTT):** To support the high bandwidth requirements of 4G and 5G, the engineer coordinates the connection of mobile sites to the fiber-optic backbone. This involves managing metro fiber ring protection and ensuring that the physical layer of the transport network can handle the 80% jump in annual data usage seen in recent fiscal years.
- **Modular Site Deployment:** The engineer leads the installation of modular end-to-end rural ecosystem solutions, which combine low-power, multi-band, all-outdoor base stations with microwave backhaul. These sites are often solar-powered and utilize smart lithium batteries to ensure service continuity in areas with unreliable power grids.
- **Incident Resolution:** He leads root-cause analysis (RCA) for network failures, utilizing advanced diagnostic tools such as Wireshark for packet analysis and Zabbix for real-time infrastructure monitoring.

VSAT & Satellite Communications (Certified):

End-to-end VSAT installation and configuration from uplink to downlink terminals. - Hands-on experience with DVB-S1 and DVB-S2 technologies. - Installation, commissioning, alignment, testing, and troubleshooting of SKYWARE, SKYEDGE, Jupiter, and related VSAT platforms. - Support for satellite phones, emergency communication systems, and remote connectivity solutions.

Broadcast Technician

Amhara Media Corporation (TV & Radio)

January 2019 – October 2019

- Installed, configured, and maintained television and radio broadcast transmission equipment.
 - **Transmitter Maintenance:** Regular maintenance and logging of readings for radio and television transmitters. This includes monitoring signal strength, clarity, and reliability to ensure compliance with national and regional broadcasting standards.
 - **Outside Broadcasting (OB):** Deployment and operation of portable field transmission equipment for live event coverage. This requires the technician to align antennas and receive dishes in field locations to obtain the clearest signal for remote transmission back to the Bahir Dar hub.
 - Provided real-time technical support during live on-air TV and radio programs.
 - Operated and maintained audio, video, studio, and field recording systems.
 - Supported outside broadcasting (OB) setups and live event coverage.
 - Diagnosed and resolved broadcast signal, equipment, and transmission faults under time-critical conditions.
 - Ensured broadcasting systems met operational, safety, and quality standards.
 - **Real-Time Troubleshooting:** Providing immediate technical support during live programs, including the configuration of IP codecs, the management of audio consoles (LAWO mc2), and the rapid swap of microphones or signal paths during emergency recoveries.
 - **Audio and Video Recording:** Stewardship of the audio-video recording chain, from field microphones to the digital archive. This involves maintaining professional studio cameras (Grass Valley HD), pedestals, and recording software to ensure high-fidelity capture of content.
-

Computer Software & Hardware Maintenance Technician (Freelance)

Bahir Dar Institute of Technology – Bahir Dar University

October 12, 2017 – June 30, 2018

- Delivered freelance ICT support services for academic and administrative staff and students.
- **Hardware Lifecycle Support:** Performing repairs and upgrades on desktop computers, laptops, and peripherals. This included hard drive replacements, RAM upgrades, and the troubleshooting of motherboard-level failures.
- **Software and OS Optimization:** Installation, configuration, and optimization of various operating systems (Windows, Linux) and academic software suites. He was responsible for ensuring that all systems were protected against malware and were compliant with university security policies.
- Installed, configured, and maintained desktop and laptop hardware, peripherals, and operating systems.
- Performed software installation, upgrades, troubleshooting, and system optimization.
- Supported LAN installations, basic network configuration, structured cabling, and connectivity troubleshooting.
- Assisted staff and students with BSc thesis document preparation, formatting, printing, and technical setup.
- Provided classroom, laboratory, and office ICT support services.
- Conducted preventive maintenance and user guidance to improve system performance and reliability.
- **Structured Cabling and LAN Setup:** Leading the installation of local area networks (LANs) within departments and laboratories. This involved physical cabling, the installation of network sockets, and the configuration of network switches to provide reliable connectivity for academic work.
- **Wi-Fi and Connectivity:** Registering student and faculty devices to the university network and troubleshooting wireless connectivity issues in high-density areas such as libraries and lecture halls.

EDUCATION

MSc in Artificial Intelligence and Data Science

Bahir Dar Institute of Technology, Bahir Dar University – Ethiopia
Expected Graduation: 2026

MSc in Financial Data Engineering

WorldQuant University
Expected Graduation: December 2026.

BSc in Electrical & Computer Engineering (Communication & Electronics)

Bahir Dar Institute of Technology, Bahir Dar University – Ethiopia
Graduated: 2018

PROFESSIONAL CERTIFICATIONS & TRAINING

- Cisco Certified Network Associate (CCNA)
 - VSAT Installation & Configuration Certification
 - Google IT Support Professional Certificate
 - IBM Data Science Professional Certificate
 - Machine Learning Specialization – Stanford (Coursera)
 - Generative AI with Large Language Models – DeepLearning.AI
 - Introduction to Cybersecurity Tools & Cyber Attacks – IBM
 - Python for Everybody – University of Michigan
-

TECHNICAL SKILLS

Networking & Telecom: TCP/IP, VLAN, MPLS, BGP, OSPF, LAN/WAN, SD-WAN, Wireless, VSAT, VHF/HF Radio, PBX, Satellite Phones.

ICT Infrastructure: Servers, Data Centers, Structured Cabling, Power & Environmental Systems.

Systems & Tools: Cisco IOS, Juniper, Wireshark, Zabbix, NetBox.

Operating Systems: Windows, Linux.

Programming & Data: Python, SQL, MATLAB.

Cloud & Collaboration: MS Teams, Video Conferencing Systems, AWS Fundamentals.

Documentation & IM: Asset Registers, Technical Manuals, Records & Archiving

LANGUAGES

- Amharic – Native
- English – Very Good (Professional Working Proficiency)

Professional References and Industry Network

Abebe Ferede

ICT Specialist – UNHCR, Melkadida

Phone: +251-912-439-249

Context: Mr. Abebe is a senior ICT leader within the humanitarian sector (UNHCR), capable of speaking about my suitability for mission-critical support in hardship locations VSAT C and KU Band installation support.

Mebrat Tensaw

Infrastructure Network Manager – Ethio Telecom

Phone: +251-916-581-217.

Context: Mr. Mebrat is Daniel's direct manager at Ethio Telecom, providing primary oversight of his work as a Senior Wireless and Infrastructure Network Engineer. He can validate his expert-level VSAT skills and his leadership in regional network expansions.
